DETAILED ACTION

Claim Objections

Claim 5 recites the limitation "the different printing" in line 5. There is insufficient antecedent basis for this limitation in the claim. For the purpose of rejection, Examiner assumes that this limitation should read "the different printing fluids."

Claim 2 recites the limitation "the printing fluid storage" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 2 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Silverbrook (US 6488422 B1).

Silverbrook teaches the following:

***regarding claim 5**, a printer cartridge for an inkjet printer, the printer cartridge comprising:

a pagewidth printhead (printhead assembly 10, Fig. 2 and col. 2, lines 16-19) with an array of nozzles (col. 2, lines 27-28) for ejecting different printing fluids onto a media substrate

Art Unit: 2861

(col. 5, lines 7-11), each of the nozzles being dedicated to one of the different printing fluids only (col. 4, lines 48-53);

a plurality of printing fluid reservoirs (e.g. ink ducts 40, Fig. 8) for storing each of the different printing fluids separately (col. 5, lines 4-7), each of the plurality of printing fluid reservoirs being in fluid communication with the nozzles of the array that correspond to its printing fluid (col. 4, line 48 – col. 5, line 7);

a refill port (for the purpose of this rejection, the collection of ports 34 in Fig. 10 is read as “refill port”) with a plurality of inlets (inlet ports 34), each of the inlets being in fluid communication with one of the printing fluid reservoirs only (col. 5, lines 4-7 and Fig. 7); such that,

each of the printing fluid reservoirs can be individually refilled to replace printing fluid ejected by the pagewidth printhead (col. 9, lines 6-9)

***regarding claim 2**, a body (ink cassette 93, Fig. 27) in which printing fluid storage is located (col. 9, lines 9-11) and to which the pagewidth printhead and the refill port are attached (col. 9, lines 6-9 and Figs. 26 and 27)

Art Unit: 2861
